

Oracle Database: PL/SQL Fundamentals Ed 2

Duration: 2 Days

What you will learn

The Oracle Database: PL/SQL Fundamentals Ed 2 course introduces students to the PL/SQL programming language. In the class, students learn to create PL/SQL blocks of application code.

Learn To:

Use various features of PL/SQL.

Write anonymous blocks of code in PL/SQL.

Use various PL/SQL conditional constructs and loops in program blocks.

Interface the PL/SQL code with the database.

Use stored procedures and functions in their program blocks.

Handle Exceptions in PL/SQL code.

Benefits To You

Students will benefit from this course as it enables programmers with the skill of using this programming language. In the class students will learn to create anonymous PL/SQL blocks, to create procedures, functions and triggers. Students will learn to use explicit cursors in their program blocks. Demonstrations and hands-on practice reinforce the fundamental concepts. Students use Oracle SQL Developer to develop these program units. SQL*Plus is introduced as optional tools.

Audience

Database Administrators

Forms Developer

PL/SQL Developer

Portal Developer

System Analysts

Technical Consultant

Related Training

Required Prerequisites

Familiarity with data processing concepts and technique

Familiarity with programming languages

Oracle Database 12c: Introduction for Experienced SQL Users

Suggested Prerequisites

Familiarity with data processing concepts and techniques

Familiarity with programming languages

Course Objectives

Design PL/SQL anonymous block that execute efficiently

Use PL/SQL programming constructs and conditionally control code flow (loops, control structures, and explicit cursors)

Handle exceptions in the program units

Create and execute simple stored procedures and functions

Write PL/SQL code to interface with the database

Describe the features and syntax of PL/SQL

Course Topics

Introduction

Course Objectives, Course Agenda and Class Account Information

The Human Resources (HR) Schema

Appendices Used in this Course

PL/SQL Development Environments

Introduction to PL/SQL

Understanding the benefits and structure of PL/SQL

Understanding PL/SQL Blocks

Generating output messages in PL/SQL

Declaring PL/SQL Variables

Identifying valid and invalid identifiers

Declaring and initializing variables

Various data types

Identifying the benefits of using the %TYPE attribute

Using bind variables

Writing Anonymous PL/SQL blocks

Lexical Units in a PL/SQL Block

Using SQL Functions in PL/SQL

Data Type Conversion

Using Nested Blocks as Statements

Referencing an Identifier Value in a Nested Block

Qualifying an Identifier with a Label

Operators in PL/SQL

Using Sequences in PL/SQL Expressions

Using SQL Statements within a PL/SQL Block

Using SQL Statements in PL/SQL

Retrieving Data in PL/SQL with the SELECT statement

Using Naming Conventions in DML Statements and data retrieval

Manipulating Data on the Server Using PL/SQL

SQL Cursors

Using SQL Cursor Attributes to Obtain Feedback on DML

Saving and Discarding Transactions

Writing Control Structures

Controlling PL/SQL Flow of Execution

Using IF and CASE Statements for conditional processing

Handling Nulls

Building Boolean Conditions with Logical Operators

Using Iterative Control with Loop Statements

Working with Composite Data Types

Composite Data Types of PL/SQL Records and Tables

Using PL/SQL Records

Inserting and Updating PL/SQL Records

Using INDEX BY Tables

Using Associative arrays

Declaring and Using VArrays

Using Explicit Cursors

Cursors

Explicit Cursor Operations

Controlling Explicit Cursors

Using Explicit Cursors to Process Rows

Cursors and Records

Cursor FOR Loops Using Subqueries

Explicit Cursor Attributes

%NOTFOUND and %ROWCOUNT Attributes

Handling Exceptions

Concept of Exception

Handling Exceptions with PL/SQL

Predefined Exceptions

Trapping Predefined and Non-predefined Oracle Server Errors

Functions that Return Information on Exceptions

Usage of PRAGMA keyword

Trapping User-Defined Exceptions

Propagating Exceptions

Creating Stored Procedures and Functions

Overview of Stored Procedures and Functions

Differentiating between anonymous blocks and subprograms

CREATE OR REPLACE PROCEDURE | FUNCTION

Understanding the Header Area of a Stored Procedure and Function

Creating Simple Procedures and Functions

Creating a Simple Procedure with an IN Parameter

Executing a Procedure and a Function
