

Oracle Database (RDBMS) Releases Support Status Summary (Doc ID 161818.1)

In this Document Was this document helpful? Document Details Related Products Information Centers Document References Recently Viewed

PURPOSE This note shows the current main Oracle Database releases along with information about the support status of each release and its Patch Sets.

SCOPE This note shows the current main Oracle Database releases along with information about the support status of each release and its Patch Sets.

DETAILS

Oracle Database (RDBMS) Releases Support Status Summary

This note shows the current main Oracle Database releases along with information about the support status of each release and its Patch Sets. To see the main support alerts or Patch Set release note updates for any release click on the 3 field RDBMS version number in the first column of the tables below.

- For detailed Patch Set past release dates and proposed future release dates see Note 742060.1
To see the desupport notices click on the hyperlinked desupport dates in Table 2 (only for releases < 9.2).
For terms used here see the Terminology section after Table 2.

Table 1 - Oracle Database Releases Status Summary

Table with 7 columns: Release (Click for Details), Current Patch Set or Annual Release (Click for Availability and Known Issues), Next Patch Set or Annual Release, Current Support Category, Premier Support Ends, Extended Support Ends, Notes. Rows include 19c, 18c, 12.2.0.1, 12.1.0.X, 11.2.0.X, 11.1.0.X, 10.2.0.X, 10.1.0.X, 9.2.0.X.

Table 2 - Additional Historical Releases with No Error Correction available

Table with 5 columns: Release (Click to see Details), Terminal Patch Set, Error Correction Support Ends (Click on dates to see Desupport Notices), Extended Maintenance Support Ends (Click on dates to see Desupport Notices), Notes. Rows include 9.0.1.X, 8.1.7.X, 8.1.6.X, 8.1.5.X, 8.0.6.X, 8.0.5.X, 8.0.4.X, 8.0.3.X, 7.3.4.X, 7.3.3.X, 7.3.2.X.

Interoperability Support

See Note 207303.1 for details of interoperability support between different Oracle releases.

Terminology Used in this Article

Release This is the first 3 fields of the Oracle Database (RDBMS). Click on the links in this column to see support status of the release, recent server alerts and latest information on Patch Sets.

Patch Set Patch sets are Oracle Corporation's mechanism for delivering fully tested and integrated product fixes on a regular basis. Patch sets provide bug fixes only; they may include limited new functionality but do not change existing correct functionality, and do not require certification on the target system.

Next Patch Set This column shows the version of the next expected Patch Set. Note that this is not a guarantee that the listed patch set will be released, and if it is released it may not be produced for all platforms.

Terminal Patch Set This is the final patch set for the release. (Some platforms may have a lower terminal patch set)

Patch Set Exception (PSE) / Interim Patch The terms "Interim Patch" and "Patch Set Exception" are synonymous. If a customer encounters a critical problem that requires a fix prior to the next patch set becoming available then they can request that a one off fix is made available on top of the latest patch set.

Limited Extended Support Extended Support is available but is limited to Severity 1 fixes only; critical patch updates will not be made available.

Error Correction Support (ECS) This term applies to server releases <= 9.0 only. Allows for fixes to new bugs / issues to be provided. Customers are expected to be on the latest Patch Set in order to get any Patch Set Exception (a one off bug fix).

Extended Maintenance Support (EMS) This term applies to server releases <= 9.0 only. This is a purchasable support option which allows one-off fixes (Patch Set Exceptions) to be obtained for critical issues.

Extended Assistance Support (EAS) This term applies to server releases <= 9.0 only. More details of what EAS encompasses can be seen in any of the desupport notices. Most importantly EAS does NOT include:

- New bug fixes nor backports of existing fixes
Escalation support nor response time adherence

Change history

28-Feb-2019 Added 19c entry
13-Jun-2018 Restored color per Oracle Management. MDS for 10.2 extended to 2019
25-May-2018 New owner. Implemented many open items, including removing non-508 compliant shading and adding R18. Dead links removed, direct links to source materials added.
